
Water & Utilities Forward

About this Community

Water & Utilities Forward is a resident-centered plan to modernize pipes, pumps, and planning across the utility. This jurisdiction combines candidate Cameron Brooks's professional experience in hydraulic modeling with a commitment to practical, plain?English transparency.

Cameron has worked with leak detection crews, capital planners, and emergency operations. The campaign proposes tiered conservation that protects essential use, accelerated repairs guided by pressure data, and clear outage notifications. Residents deserve a system that is resilient in drought and storms alike—and data they can actually use to plan their day.

Here you can review proposed rules, weigh in on priorities, and track progress as projects move from map to trench to restored pavement.

Sample Rules / Principles

- **Capital Plan & Pavement Restoration**

Coordinate main replacements with street programs; publish trench cut schedules and restoration timelines.

- **Winterization & Freeze Readiness**

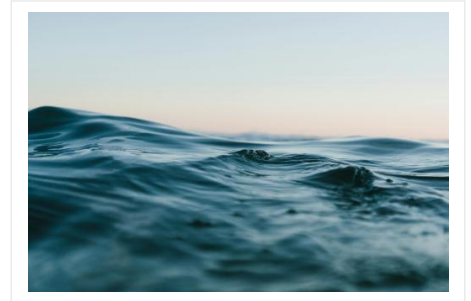

Insulation kits and tutorials; asset protection at plants and tanks; after?action reports for cold snaps.

- **Hydrant Testing & Fire Flow Improvements**

Annual flow testing by zone with deficiency fixes tied to the capital plan; publish hydrant status and color codes.

- **Lead Service Line Mapping & Replacement**

Crowdsource inventory data, offer at?door tests, and bundle replacements by block to avoid partials; publish progress maps.
